

Human-Computer Interfaces For Energy Efficiency

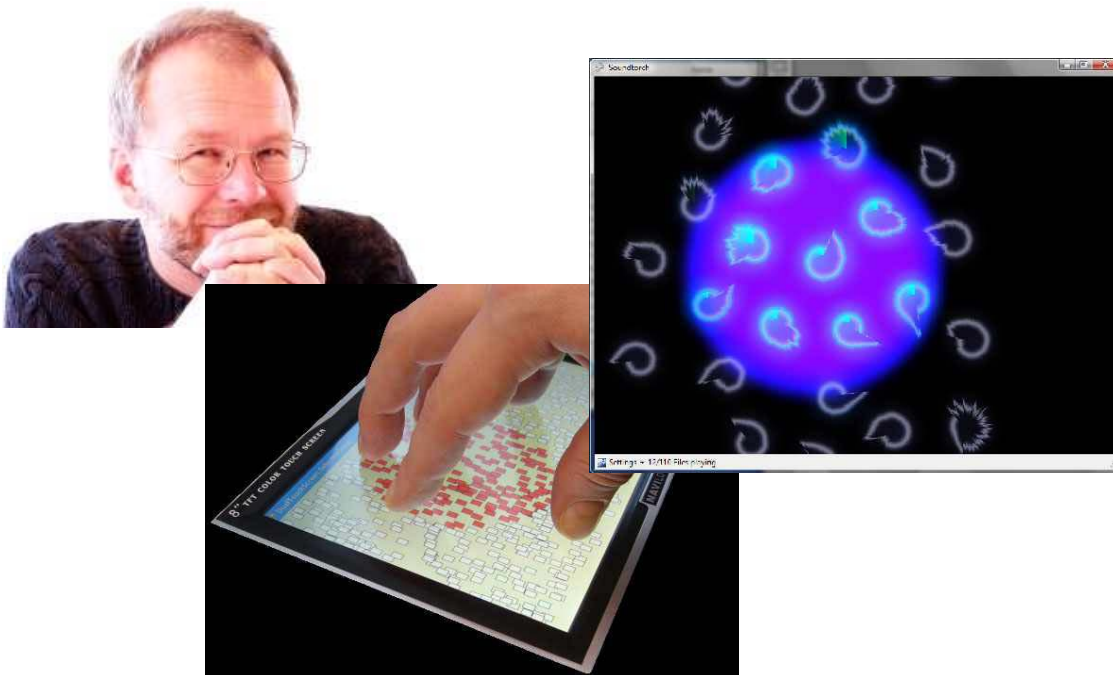

Emerging Media Program,
Entertainment Technology Presents

Jörn Loviscach

Professor
Technical mathematics and
computer engineering
Fachhochschule Bielefeld, Germany

There are manifold ways to apply user interfaces to conserve energy in daily life. Dr. Loviscach will present several scenarios applying HCI for cultivating energy efficiency consciousness: 1) as an informational or reminder source through scientific visualization and ambient media; 2) as a reward system through social media; and 3) as a remote control system anticipating smart grid technology. This talk aims at giving an overview, stimulating discussions, and forming the basis for joint projects between CityTech and Fachhochschule Bielefeld.

Amphitheater

1 PM October 9 Friday

300 Jay St. Brooklyn, New York
